

Dexter E. Ochavillo

PROFESSIONAL SUMMARY

A diligent and dedicated student with a strong ability to balance academic responsibilities and practical work experience. Demonstrates excellent time management skills and a commitment to applying theoretical knowledge in real-world settings. Adaptable, responsible, and eager to expand my skills through continuous learning. I am ready to contribute my capabilities and work ethic to a valuable On the Job Training opportunity

PROJECTS

● My Personal Web Portfolio

My web portfolio is a simple yet elegant static website built entirely with HTML and CSS. It showcases my personal information, skills, and selected projects in a clean and responsive design. The portfolio serves as my digital résumé and an online space where potential employers or clients can learn more about me and my work.

● Enrollment System

The enrollment system we created is our final project for school. It is a web application built using React as the main framework, JavaScript for dynamic functionality, and Tailwind CSS for a clean and responsive user interface. The system allows students to register for courses online, view available subjects, and manage their enrollment status efficiently. Administrators can manage student records, update course offerings, and monitor enrollment data in real time. This project demonstrates our ability to build a fully functional, user-friendly system using modern front-end technologies, component-based architecture, and responsive design best practices.

● Ecommerce

Our e-commerce website is a final project built to demonstrate how to create a simple online shopping platform. It uses React as the framework, JavaScript for all interactive functionality, and CSS for designing a clean and responsive user interface. The website includes features like product listings, product detail pages, a shopping cart, and basic checkout flow. Users can browse items, add products to the cart, and review their orders. The site's layout is fully responsive to ensure a smooth experience across different devices.
